Description	OX40L is a cell surface molecule, also known as CD252. It is a receptor ligand and a member of the tumor necrosis factor family. OX40L typically binds to its receptor OX40, thereby transmitting signals between immune cells and regulating the activation and proliferation of T cells. This signaling is crucial for the normal functioning of the immune system, making OX40L potentially important in immune regulation and therapy.

SDS-PAGE

On SDS-PAGE under reducing (R) condition. The gel was stained overnight with Coomassie Blue. The purity of the protein is greater than 95%.
